Enola, PA – September 22, 2008 – CyberPatrol, a leading developer of parental controls and web filtering solutions, today announced partnerships with two leading security specialist channels, Walling Data Systems and Software Security Solutions. Both companies have signed up for CyberPatrol’s Certified Reseller program, which is designed to support channel partners in delivering CyberPatrol solutions to their customer bases.

Walling Data Systems, based in North Carolina, is a leader in providing computer, network and information technology security solutions to educational, government, and commercial customers. Walling Data Systems is the highest volume distributor of AVG Technologies’ security products in North America, and CEO Luke Walling sees the CyberPatrol line as a perfect complement to AVG’s solutions.

“Ensuring Internet security and safety for parents and in the classroom, is a major challenge, especially as more and more learning and teaching involves the Internet,” said Walling. “The fact that CyberPatrol’s complete range of products are all built on the same proprietary content filtering engine, made partnering with CyberPatrol an easy decision. We look forward to helping our customers get a better grip on appropriate web usage.”

Software Security Solutions, based in Colorado, is focused on providing all elements of the company’s proprietary Layered Security Solution to home and small business users across the country. The company’s mission is to simplify layered security and provide only best-in-class solutions for each security layer.

“Different solutions are required for different threats. We pride ourselves on providing our customers with early-adopter insight and best-in-class solutions,” said CEO Monte Robertson. “The problems stemming from users viewing inappropriate content and interacting with “open” technologies like Web 2.0 led us to add the CyberPatrol range of parental controls and web filtering solutions to our recommended products list. By aligning ourselves with a technology leader like CyberPatrol and matching their products with our customer base, we can save our customers time and money by giving them control over family or employee use of the web.”

CyberPatrol’s range of products for consumer, SMBs (including schools and libraries) and the enterprise market are built on the proprietary SiteCAT platform, a unique content filtering engine that continuously filters the web for inappropriate content. The products include CyberPatrol Parental Controls software for the home, educational, and small business market, and SiteSURV and SiteSURV *plus* web filtering services that operate in

the cloud. CyberPatrol products are specifically designed to help home, educational, and business computer users to manage Internet access based on acceptable usage.

“Walling Data Systems and Software Security Solutions are welcome additions to our Certified Reseller program,” said CyberPatrol VP of Business Development Lennie Myers. “Both companies are recognized leaders in their fields offering best-in-class solutions. We’re delighted that their customers will now be able to benefit from our cost-effective web filtering solutions.”

### **About Walling Data Systems**

Founded in 1994, in North Carolina, Walling Data Systems is a Value-added Reseller (VAR) and IT Solution Provider offering innovative high-value solutions to everyday computer security problems for corporate, education, and home technology users. Walling Data was named an Authorized AVG Partner in 2004 and is the only source for free unlimited US-based phone, email, and remote support, as well as educational discounts, and more for their AVG customers in the United States, one reason why thousands of educational buyers choose Walling as their supplier of choice. The company also carries the Cymphonix line of web traffic management solutions. More information at <http://www.wallingdatasystems.com>

### **About Software Security Solutions**

Software Security Solutions is a Colorado-based technology company, founded in 2001 to deliver appropriate security solutions to consumers and small to mid-sized businesses. By focusing on computer security threats and continually researching and rigorously testing a wide range of security offerings, the company is able to provide up-to-date guidance and insight for consumers and businesses. Software Security Solutions advocates a layered approach to security and offers a range of best-in-class solutions that can be integrated into a layered security framework to protect every aspect of computers and networks. ### **About CyberPatrol, LLC**

CyberPatrol is a pioneer and leader in the web filtering market. Launched in 1995, CyberPatrol is specifically developed for ease of use to help protect families and businesses from undesirable or threatening online activity.

In 2008, a group of private investors acquired CyberPatrol. Under the direction of a successful, seasoned executive management team, CyberPatrol then acquired Emerald Technology, Inc. in June of 2008. As part of this acquisition, CyberPatrol acquired SiteCAT, the core technology behind all of CyberPatrol’s world class filtering products. These products include CyberPatrol Parental Controls, SiteSURV and SiteSURV *plus*. These cost-effective products are easily implemented and enable businesses to manage employees’ Internet access based on their acceptable use policy.

CyberPatrol is recommended regularly as the product of choice for online safety by many parent and computer magazines. Its award-winning software is relied upon and trusted by parents, schools, libraries and businesses around the world to monitor and manage their users' Internet access, while providing them with the freedom and safety to explore. <http://www.cyberpatrol.com>
